## Project 2 - Part 2

1. What are the four "boxes" in the CSS Box Model?
2. Consider the CSS properties padding and margin. Which is on the inside of the element, and which is outside?
3. Of the following five CSS properties associated with the box model:  
  
width, height, padding, border, and margin  
  
all can be defined using a single value except one. Which one is different, how?
4. Give an example of 3 inline HTML elements/tags. (List up to 10 each for extra credit.)

5. Give an example of 3 block HTML elements/tags. (List up to 10 each for extra credit.)

6. What is the difference between `display:inline;` and `display:block;`

7. Explain `display:inline-block;`

8. List 3 CSS units. (List up to 10 for extra credit.)

9. Explain the difference between absolute units and relative units in CSS
